

OS-LINEAR

Linear welding unit

THE FUTURE OF ORBITAL WELDING

DESCRIPTION:

The OS linear units can be ordered from 100 mm to 3,000 mm. A toothed belt was used as the drive system which guarantees a quiet run.

The system is equipped with two emergency stop switches, which are mounted on both ends.

The process distance is set via two individually adjustable read sensors. The system can be equipped with our wire system, arc voltage control and our oscillation.

APPLICATIONS:

- Applying of material on surfaces
- Welding of, for example, corner seams on metal boxes
- Welding of strips
